Results 1 - 14 of 14 short listing

1 On fundamentals of computer-aided design of firmware 80%

Igor Hansen , Jacek Leszczylowski

Proceedings of the 13th annual workshop on Microprogramming November 1980

A real-time model of microprogrammed hardware is described. It is used for firmware classification and for stating the conditions under which an equivalent discrete-time model can be introduced. We also give a brief description of a computer-aided firmware design system, which was based on these models.

2 Vertical benchmarks for CAD 80%

3 An Environment for Dynamic Component Composition for Efficient Co-Design 77%

F. Doucet , S. Shukla , R. Gupta , M. Otsuka

Proceedings of the conference on Design, automation and test in Europe March 2002

This article describes the Balboa component integration environment that is composed of three parts: a script language interpreter, compiled C++ components, and a set of Split-Level Interfaces to link the interpreted domain to the compiled domain. The environment applies the notion of split-level programming to relieve system engineers of software engineering concerns and to let them focus on system architecture. The script language is a Component Integration Language because it implements a component m ...

4 Class management for software communities 77%

Simon Gibbs , Eduardo Casais , Oscar Nierstrasz , X. Pintado , Dennis Tsichritzis

Communications of the ACM September 1990

Volume 33 Issue 9

Object-oriented programming may engender an approach to software development

characterized by the large-scale reuse of object classes. Large-scale reuse is the use of a class not just by its original developers, but by other developers who may be from other organizations, and may use the classes over a long period of time. Our hypothesis is that the successful dissemination and reuse of classes requires a well-organized community of developers who are ready to share ideas, methods, tools and ...

5 Defining and implementing a multilevel design representation with simulation applications 77%

J. A. Nestor , D. E. Thomas

Proceedings of the nineteenth design automation conference January 1982

A design representation that incorporates descriptions at more than one level of abstraction is called a multilevel representation. This paper describes a multilevel representation which includes behavioral and structural levels of description, and a multilevel analysis aid, called timing abstraction, which extracts timing information from a structural design and adds it to a behavior level description. With this design aid, alternate implementations of the same behavior, generated using th ...

7 Parallelism in processing queries on complex objects 77%

T. Harder , H. Schoning , A. Sikeler

Proceedings of the first international symposium on Databases in parallel and distributed systems January 2000

Complex objects to support non-standard database applications require the use of substantial computing resources because their powerful operations and their related integrity constraints must be performed and maintained in an interactive environment. Since the exploitation of parallelism within such operations seems to be promising, we investigate the principal approaches for processing a query on complex objects (molecules) in parallel. A number of arguments favor methods based on intermo ...

8 Three dimensional UML using force directed layout 77%

Tim Dwyer

Australian symposium on Information visualisation - Volume 9 December 2001

There is evidence to suggest that three dimensional representations of connected graphs have a number of advantages in conveying information to users over their two-dimensional counterparts. In this paper we explore the use of a Force Directed Algorithm to layout three dimensional UML Class diagrams representing the architecture of object oriented software systems. We describe a simple evaluation and usability study conducted on the proposed system and present our findings which indicate some un ...

9 Interactive computer graphics for computer aided design in civil engineering 77%

John L. Wilson , Charles R. Lansberry

ACM SIGGRAPH Computer Graphics , Proceedings of the 3rd annual conference on Computer graphics and interactive techniques July 1976

Volume 10 Issue 2

Interactive computer graphics can be an effective and efficient aid in the analysis/design cycle of engineering problems. The vistas of much engineering research and design can be expanded with the tools and methodology available with the introduction of an interactive computer graphics (ICG) system into an academic

or industrial environment. Specific attention is given in this paper to new areas of application of ICG in civil engineering; guidelines for the planning of ICG systems; practical ap ...

10 A hierarchical boundary model for solid object representation 77%

Leila De Floriani , Bianca Falcidieno

ACM Transactions on Graphics (TOG) January 1988

Volume 7 Issue 1

A new hierarchical model for solid object representation is described. This model, called a hierarchical face adjacency hypergraph (HFAH), is based on a relational description of the object boundary, called a face adjacency hypergraph (FAH), which considers faces as the primary topological entities defining the object boundary. The HFAH consists of a hierarchy of FAHs describing the decomposition of the boundary of an object into form features. In this paper ...

11 A model of design representation and synthesis 77%

Robert A. Walker , Donald E. Thomas

Proceedings of the 22nd ACM/IEEE conference on Design automation June 1985

To represent the increasingly complex designs being produced today, we have developed1 a unified model of design representation that uses three hierarchical, non-isomorphic domains of description that can be coordinated to represent the entire design. Each of these domains contains multiple levels of abstraction; both the domains and the levels are described in detail in this paper. We then show how this model of design representation can be used as a model of design sy ...

Abstract

Following completion of a 3500 tonne oil production platform for Shell /Esso, Red path Dorman Long (North Sea) Ltd., concentrated work on the second order from the same clients for the Brent A jacket structure. This structure was built by innovative **construction** methods which demanded that the client be satisfied that the structure would not be over-stressed and thus become damaged. Thorough and accurate analysis of complex constructional arrangements was therefore necessary. Temporary works design was also aided by the approach. A monitor of stress levels during erection of major **structural components** was also established. (0 refs).
